

Keep them out of the landfill!

Save your K-cups and Filterpacks!

Single-cup drink systems are revolutionary in their convenience, but many of our customers have expressed concerns about their environmental impact, since they generate mixed wastes that aren't easily recyclable or biodegradable.

Both Flavia and Keurig are actively working on solutions to make their products more recyclable and biodegradable. But in the meantime, there are still ways that you can make your single-drink system more eco-friendly!

Please keep your used Keurig K-cups and Flavia filterpacks separate from your other wastes.

Costless Express will collect your used K-cups and filterpacks and take them to a local Waste-To-Energy facility. There, their materials will be reclaimed and recycled to the fullest extent possible, and the remaining wastes will be used to generate electricity in an environmentally sound manner. The small amount of resulting ash is safe for disposal, and is even used in concrete and road construction. This is a far more sustainable option than disposal to a landfill.

For more information on the Waste-To-Energy process, please visit:
